

Enviral Tech: Keeping Seniors and Staff Safe from COVID-19

Enviral Tech is an infection control company founded by scientists who are committed to making the latest technologies available to anyone who wants to fight against infectious diseases within our communities. Early in 2020, Enviral Tech became the first company to offer environmental COVID surface testing as a tool for the early detection of virus incursion into long term-care facilities. Today we continue to lead the charge against viral infections in long-term and senior care.

Enviral Tech's surface testing solutions provide critical early viral detection, which is essential for pre-

venting new infections and improving consumer confidence, in ways that diagnostic testing cannot.

- Developed the first COVID-19 surface test
- Delivers fast 24-hour surface test result turn-around
- Serves hundreds of senior communities nationwide with more than 20,000 tests performed
- Platform will soon include the ability to detect other viral and bacterial infections such as Norovirus, C. difficile, and MRSA

Why surface testing?

40% of people infected with COVID-19 never develop symptoms, and those who do develop symptoms often shed the most virus right before they feel sick. The goal of testing everyone comprehensively is crucial to stemming an outbreak. Yet access, cost, turnaround time, and the reliability of diagnostic tests make them unfit on their own for true surveillance and the early detection needed for effective contact tracing.

Our solution

- COVID surface testing
- COVID + influenza surface testing

The surfaces in our buildings are collectors of virus being shed by infected people, even when we cannot tell that these people are infected. In fact, forty percent of people infected with COVID-19 never develop symptoms and those who do develop symptoms shed the most virus before they ever feel sick. By testing surfaces in high traffic areas, we are testing everyone in these spaces in a single test, giving you visibility to the viral status of your community in a cost effective manner.

Benefits

Provides non-invasive testing that minimizes outbreaks

- Detects COVID regardless of symptoms and provides relief to those who have issues with diagnostic testing, such as memory care patients
- Provides continued surveillance of the entire community between diagnostic tests including those who were not tested
- Gets reliable results within 24 hours of your sample arriving in our lab
- Provides up to 5 days early warning to contact trace and isolate asymptomatics before they spread the virus

Enables better infection control procedures

- Validates whether existing infection control protocols are working or if there are gaps that should be addressed
- Monitors infection control compliance
- Supports Provider Relief Fund's infection control mandates

Provides competitive advantage in today's challenging senior care market

- Builds residents' and their families' confidence that your facility is doing all it can to keep residents and staff safe
- Helps keep higher occupancy rate and less room turnovers with a stronger ROI
- Reinforces the marketing message of COVID safety within your building and website through our certificates and virtual badges

See what senior communities are saying about surface testing

"We had a positive COVID in one of our communities. [Surface Testing] allowed us to be a full week ahead of when we would have seen symptoms."

Sarah Silva, Division President of Community Based Care, Avamere

"Surface testing allowed us to improve our cleaning protocols and how to monitor outside providers to prevent the virus from entering our facilities."

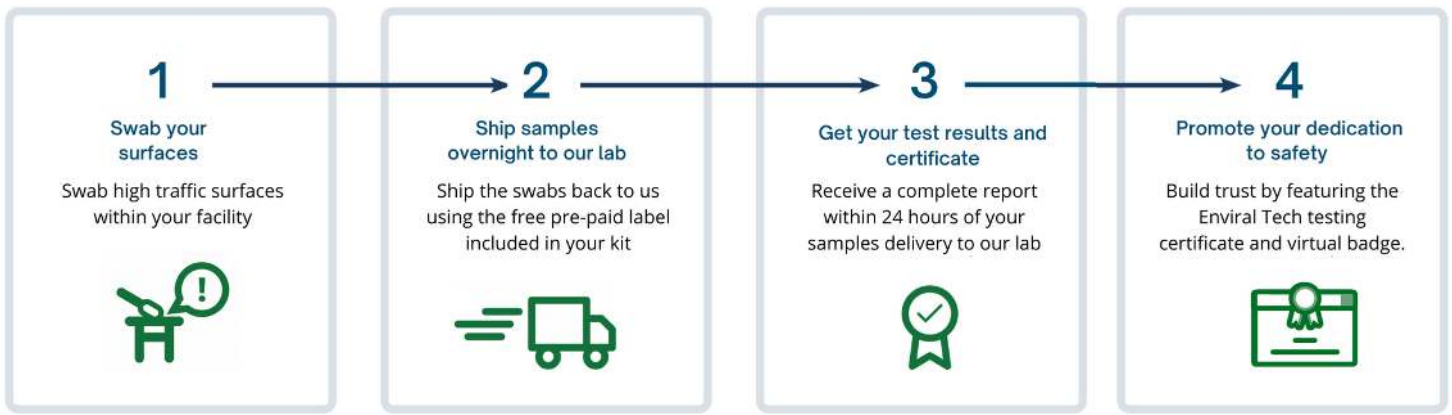

Brenda Connelly, Chief Quality Officer, The Springs Living, LLC

"Surface testing has given us the confidence to allow people to move back in. It's very powerful to offer that confidence."

Fee Stubblefield, CEO, The Springs Living, LLC

How it works

Our surface testing can easily be done by a staff member swabbing surfaces in high-traffic zones such as door handles, elevator buttons, common computers, medication carts, and employee time clocks.
