

# Manor Village

Residents Breathe Better with  
**Plasma Air**

Viruses

Bacteria

Mold

Pollen

Dust

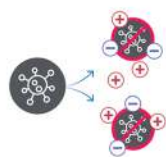

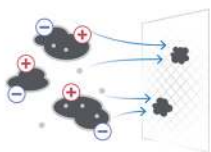

## We Care About the Air You Breathe

We care deeply about your health, even down to the air you breathe. That is why we have installed a Plasma Air System to minimize mold, dust, and pollen and kill dangerous airborne bacteria and viruses.\*

\*Independent research demonstrates that with the Plasma Air's ionization system, over 99-percent of airborne MS2 bacteriophage, a surrogate for SARS-CoV-2 (COVID-19), is reduced in indoor environments.

This comprehensive indoor system helps us maintain optimal indoor air quality while reducing infection rates and allergies for both residents and staff, improving overall wellness and productivity.
